

TAKE PART IN SUSTAINABLE DEVELOPMENT!

Thanks to new programs funded by Dulis to reduce your carbon impact.

GREEN LIGHT FOR THE FOREST

By joining Green Light for the Forest, Dulis commits to planting trees to neutralise the carbon footprint from the transportation of our products.

This program is free of charge and imposes no obligation on you. Simply write to our dedicated team at the following address:

For low environmental impact products, find our Gogreen range on <https://www.dulis.nl/product/DDGG-01-01>

THE FOREST, ESSENTIAL TO LIFE

The forest contributes to the natural balance, providing essential resources to the planet. Acting for the forest means generating benefits for nature and for humanity:

- **Environmental benefits:** as the first terrestrial carbon sink, forests are the best natural solution to fight against climate change and to maintain biodiversity;
- **Socio-economic benefits:** wood, sustainable resources, water resources, employment, health, well-being of populations.

THE GREEN LIGHT FOR THE FOREST PROGRAM

We estimate that the transportation of laboratory consumables by plane, boat or truck generates a carbon footprint of up to 130 kg of CO₂ per ton of products. Since a tree absorbs an average of 35 kg of CO₂ per year, **4 trees would have to be planted to neutralise the impact of transporting one ton of plastic.**

By joining Green Light for the Forest, Dulis commits to planting trees on your behalf: **1 tree for carbon neutrality, and 1 additional tree for every 250 kg of plastic supplied to your facility.** That is 8 trees planted per ton of plastic. This program is free of charge and imposes no obligation on you.
